### RPC Technologies – Victorian Facility Update

---

---

The construction of RPC's new multi-purpose facility in Corio continues to progress well. Whilst inclement weather during the past month has inhibited progress somewhat, all efforts are being given to ensure the impact to overall program is minimised.

Whilst primarily a production facility, special attention has been paid to ensure the Corio facility is also suitable for;

- Warehousing and distribution of RPC product to our Victorian customers. This is irrespective of where the product was originally manufactured within the RPC group (now 5 major sites all up).
- Assembly and value add activities on RPC manufactured product that may be required by our Victorian customers to allow delivery of fully assembled 'kits' directly to site or production lines.
- Pre-delivery quality inspections where trans-shipping of RPC products occurs from other RPC facilities before being despatched to our Victorian customers.
- Adequate office capacity to accommodate technical support services, local project management, logistics management and administrative functions.
- Specialist yard storage requirements. Currently in excess of 10,000m<sup>2</sup> of available hardstand.
- Sufficient site flexibility to cater for the future needs of our Victorian customers.

This facility confirms the long-term commitment that RPC has made to all of our Victorian customers and to the future of Victorian industry.
